## **Abstract**

**Objective:** The purpose of this study was to measuring university students' religiosity and their demographical characteristic. **Method:** 1911 university students were studies in a survey which used stratified random sampling. The student religiosity scale developed by Khodayarifard (2006) was used. **Results:** As the level of parents' education increases, the degree of religiosity increases among university students, **Discussion:** It can be concluded that instruction and practice of religious beliefs and acts in the family has a considerable effect on internalization of the principles and beliefs by the family members through modeling and identification with the parents.
