Personality profile, Emotional Intelligence and self-concept in people with and without Failure in love

Abstract

The aim of this research was to investigate personality profile, Emotional Intelligence and self-concept in people with and without Failure in love . For this reason, 39 participants with Failure in love (26 women and 13 men) and 45 normal participants (26 women and 19 men) were selected by available method research and were answered Bar-on`s emotional intelligence questionnaire, Multiphasic Minnesota Personality Inventory (short form), Roger`s self-concept questionnaire and Strenberg`s love scale. The results showed that people with Failure in love have low level of emotional intelligence and low level of self-concept than people without Failure in love. and there was significant difference in some component of emotional intelligence between two groups. And so two groups dont have different personality profile.

These results can applied in diagnostic and therapeutic services for people with failure in love by psychologist and consultants.

Key words: Emotional Intelligence; Failure in love; self-concept and love.
